Copy 2 of 8

MEMORANDUM FOR : Director of Operations
THRU : Contracting Officer
SUBJECT : Radar Requirements

1. I have discussed the general problems related to the AN/APQ-56 radar with the following on 22 March 1956:

The main purpose of the meeting was to establish a procedure for setting up requirements for the radar "take." The following conclusions were reached:

a. The basis for planning at Eastman for processing exposed radar film should be the maximum flight capability of the radar carrying aircraft. Project Operations should define these aircraft, their maximum capability and their anticipated dates of operation.

b. Autocat will handle all the radar material for CIA and probably for the Army and Navy. Mr. Reber is to confirm the latter in discussions with Army and Navy requirements personnel.

c. Eastman Kodak will handle the Air Force requirements for radar as it does regular photography. Mr. Reber is to obtain requirements of numbers of copies and form of presentation from AFMIX and SAC.

d. Target date for conclusions on points b and c above is 1 May 1956.

e. Final requirements for radar utilization preferably should not be developed prior to the examination of the aerial photography.
